

ASSIGNMENT 1

VOID FUNCTIONS

JavaScript Programming Exercise

Topic	Language	Level	Questions
Void Functions	JavaScript	Beginner	5

Instructions

- Write a **void function** for each question.
- Your function must perform the required task and **display the result**.
- Use **parameters** where required.
- **Do not use loops or return statements.**

Question 1: Calculate Total Marks

Write a void function called **calculateTotalMarks** that receives the marks for three subjects, adds them together, and displays the total marks.

Reference Pseudocode

```
FUNCTION calculateTotalMarks(mark1, mark2, mark3)
  total = mark1 + mark2 + mark3
  DISPLAY total
END FUNCTION
```

Question 2: Calculate the Area of a Rectangle

Write a void function called **calculateArea** that receives the length and width of a rectangle, calculates the area, and displays the result.

Reference Pseudocode

```
Area = Length × Width
FUNCTION calculateArea(length, width)
  area = length * width
  DISPLAY area
END FUNCTION
```

Question 3: Calculate Age

Write a void function called **calculateAge** that receives a person's birth year and the current year, calculates their age, and displays the result.

Reference Pseudocode

```
Age = Current Year - Birth Year
FUNCTION calculateAge(birthYear, currentYear)
  age = currentYear - birthYear
  DISPLAY age
END FUNCTION
```

ASSIGNMENT 1 — VOID FUNCTIONS

Question 4: Check Student Result

Write a void function called **checkResult** that receives a student's mark. If the mark is 50 or above, display **"Pass"**. If the mark is below 50, display **"Fail"**.

Reference Pseudocode

```
FUNCTION checkResult(mark)
  IF mark >= 50 THEN
    DISPLAY "Pass"
  ELSE
    DISPLAY "Fail"
  END IF
END FUNCTION
```

Question 5: Calculate Total Price

Write a void function called **calculateTotal** that receives the price of an item and the quantity purchased. Calculate and display the total cost.

Reference Pseudocode

```
Total Cost = Price × Quantity
FUNCTION calculateTotal(price, quantity)
  total = price * quantity
  DISPLAY total
END FUNCTION
```

Before You Submit

- ✓ Use a function for every question.
- ✓ Use parameters where required.
- ✓ Perform the required calculation or decision.
- ✓ Display the answer.
- ✓ Do not use **return**.
- ✓ Do not use **loops**.

Challenge yourself: Test each function with at least two different sets of values.
